Comments Matrix- ELITE FOUR

MNTSDEV – Finals

(Manuel Sebastian S. Sanchez)

Comment	Response
The three of the related system are foreign; there is no local related system about repair shops or service shops of automobiles in the Philippines. So, you may want to include that one so that you can also get ideas on how actually the local auto service centers do their jobs here in the Philippines. It can also help to you web-application.	The team responded that they would search for more local related systems that is absent in the final paper, so that they may have a better view of the existing local web-app in the Philippines.

Based on the comment matrix, I think there's some improvement. But I'm still struggling to see the alignment of identified problems that stated in your documentation and in your objectives. Your point number one and number two, I don't still see the alignment. So, I think you need to change this and write it properly.	The team responded that they would reconstruct and rephrase the objectives to align it better with the content of the SOP as well as the needs of the client.
Put in your objectives that "To make the client to stand out among other competitors"	The team responded that they would edit the objectives and input what Mr. Jayvee has suggested in the objectives.

Your problem is you did not highlight the booking at all, it was not mentioned in your product vision— there is no clear mention of bookings in objectives and all over the paper.	The team responded that they would edit the file and mention the booking as well as the other features to be able to highlight them better in the paper. Furthermore, the team has expounded on the details about analytics that will be integrated in the project.
Highly suggest if you want to follow the requirements of a capstone where in you will identifying a business process later on, then you have to put in an e-commerce set of business functions: booking, reservation, customer service, payment, reports. You have to update your product vision.	The team responded that they would add new features for the web-app to make sure that it has ecommerce set of business functions. The team has consulted their client with the e-commerce set of business functions added such as: Login, customer profile, and online payment. After the agreement, the team added these functionalities in the plan for the creation of the web-app.
Are you still going to use the Facebook page or link it to Facebook?	The team responded that they would link the Facebook Page of D7 to the web application with the use of social media buttons to link the company's current social media platforms.
What is your main platform?	The team responded that the main platform will be the created web-app. However, after consideration with the comments and suggestions of the panelist, the team decided that there is no hierarchy between which platform is main. Thus, both platforms are to be used by D7.
Avoid mentioning Facebook to much	The team responded that they would edit and revise the paper to lessen the mentions of Facebook, and highlight the key features of the project.
